

Guardian Agent

Secure enterprise innovation for the era of autonomous operations.

30%

The Era of Autonomous Operations

According to Gartner, more than 30% of enterprise workloads will involve autonomous AI agents by 2026.

This is no longer about simple chat assistants. Autonomous systems are executing tasks, accessing data, and making decisions. The enterprise must adapt its governance architecture immediately, or face unprecedented scale of risk.

The Expanding GenAI Attack Surface

AI-Assisted Code

Developer IDEs (Cursor, Copilot) silently leaking proprietary code and API keys.

Private LLM Exposure

Unprotected internal models vulnerable to adversarial manipulation.

Traditional Security Perimeter

Embedded AI Services

Third-party APIs in enterprise apps creating hidden entry points.

Shadow AI

Unauthorised employee adoption bypassing compliance frameworks completely.

Introducing DefenGPT AI Security Platform

A unified command centre for your entire GenAI security posture. DefenGPT delivers end-to-end protection, monitoring, and real-time policy control across both human and AI agent interactions, securing your AI assets before they scale.

Guardian Agent: Real-Time Interception and Control

Autonomous AI Agent

The Challenge: Agents can access systems and trigger workflows autonomously, risking permission overreach or prompt injection attacks.

Guardian Agent

The Solution: Guardian Agent enforces policy-driven controls over agent behaviour, tool access, and execution permissions in real-time.

Enterprise Resources

Ensures autonomous AI operates strictly within secure, auditable enterprise boundaries.

The Core Governance Engine

1. Discover

Full visibility into every AI agent across both user and developer environments. Know what is running and what it accesses.

2. Evaluate

Assess agent behaviour, tool access, and risk posture in real-time before issues arise.

3. Enforce

Apply strict, policy-driven controls to ensure secure, auditable AI operations.

Universal Coverage: Every Agent, Everywhere

Partial visibility is zero security...

Homegrown

Homegrown across
singham and closely
their environment

IDE & Endpoints

Enables segment in
agent detection &
business factors

IDE & Endpoints

Essential Security Capabilities

Enterprise Risk

Unauthorised data retrieval & system access

Adversarial instruction overrides & malicious manipulation

Automated misuse & rogue decision pathways

Unsanctioned access to MCP services

Guardian Agent Defence

Tool Access Enforcement: Defines and restricts the exact tools agents can use.

Prompt Injection Defence: Actively blocks unauthorised workflow triggers.

Runtime Behaviour Monitoring: Detects abnormal execution patterns instantly.

Identity & Access Control: Governs strict Role-Based Access Control (RBAC).

Five-Step Secure Execution Process

```
graph TD; Step1[1. AI Agent Instruction] --> Step2[2. Tool / MCP Layer]; Step2 --> Step3[3. AI Agent Firewall]; Step3 --> Step4[4. Policy Engine Decision]; Step4 --> Step5[5. Execution Monitoring];
```

1. AI Agent Instruction

Agent receives a task from a user or system.

2. Tool / MCP Layer

Agent attempts to access connected services.

3. AI Agent Firewall

Guardian intercepts the request mid-flight.

4. Policy Engine Decision

Request is rigorously evaluated, then approved or denied based on corporate rules.

5. Execution Monitoring

All actions are mapped to an activity trace and logged for absolute auditability.

DefenGPT Private AI & Model Governance

For your most sensitive data, deploy private LLMs with absolute data isolation so corporate data never leaves your perimeter.

1. Risk & Trust Assessment

Evaluate internal models before they touch production.

2. Vulnerability Testing

Built-in red teaming to identify jailbreaks, weaknesses, and abuse risks.

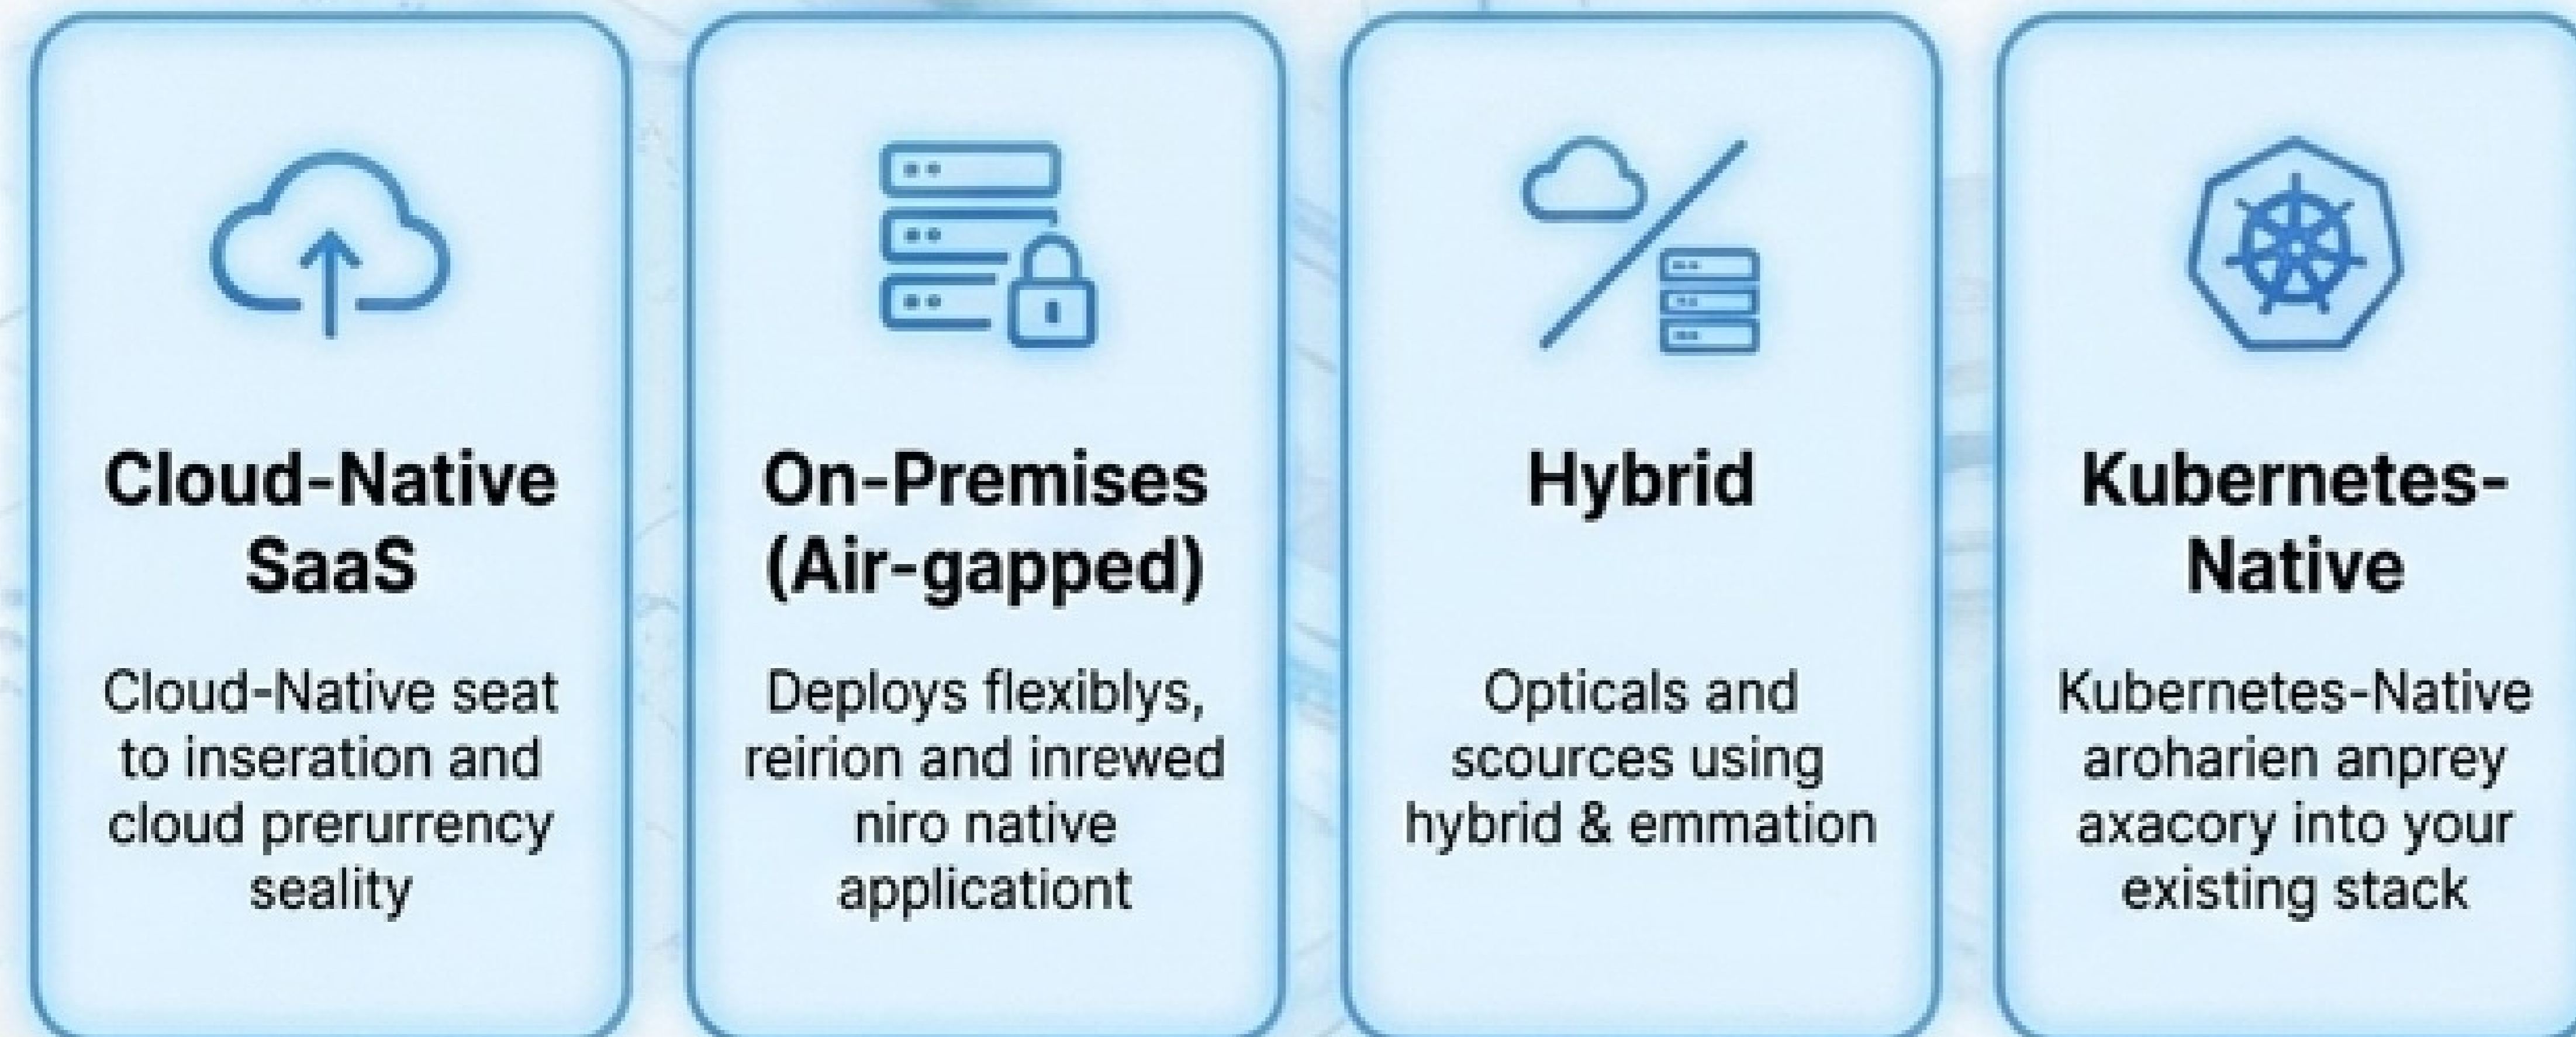

3. Total Data Sovereignty

Every interaction remains internal, secure, and fully auditable.

Enterprise-Grade Flexibility & Integration

Built for enterprise reality. DefenGPT deploys flexibly and integrates seamlessly into your existing stack.

Deploy Anywhere

Integrate Everywhere

Deployed Where the Cost of a Breach is Unacceptable

Global Investment Bank

Blocked 2,400+ policy-violating prompts in 30 days.

**94%
reduction**

in Shadow AI, securing
GDPR & SEC compliance.

Multi-State Healthcare Network

Prevented clinical tools from transmitting patient notes.

**0 PHI
exposure**

incidents, ensuring
absolute HIPAA alignment.

Fortune 500 Software Firm

Governed developers using Copilot & Cursor.

**Zero
IP Exfiltration**

across 8,000+ engineers.

Global Compliance & Trust Alignment

Built on the world's leading AI governance frameworks. Deploy AI globally with absolute confidence.

NIST AI RMF

Aligned to Govern, Map, Measure, and Manage functions.

EU AI Act

Risk classification and prohibited use enforcement.

ISO/IEC 42001

Certified AI governance processes.

OWASP

Full threat taxonomy protection against prompt injection and poisoning.

Gartner TRiSM

Mapping to explainability, ModelOps, and privacy.

DefenGPT By The Numbers

0%

Shadow AI Reduction. Average reduction in unauthorised usage within 30 days.

100%

Audit Coverage. Complete session logging for every AI interaction.

1000s

Threats Blocked Daily. Injections and policy violations intercepted per enterprise.

0 Days

Time to Value. Immediate deployment-to-detection time for new customers.

Your AI is in production. Is it protected?

Secure your AI agents before they scale. Control execution. Govern behaviour.
Prevent AI misuse. Speak to an AI Governance Specialist today.
